                                                                                                       The present sequence encodes a gibberellic acid 2-oxidase 2 protein sequence, which is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels may be inhibited or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta-hydroxylase, oxidase, phytoene synthase, C-20 oxidase, and a 2beta, 3beta-hydroxylase polynucleotides to achieve this. The method is used to control seed germination and seedling growth especially to regulate gene products of gibberellin biosynthetic pathway and restoration of normal seed germination, in transgenic plants. The plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                532

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TTTCGAAGTGTGAAACACAGAGTTTTGACAAATGGATTTAAGTCTAGACTCTCAATGATT 958
normally reducing agronomic output can be avoided and yields increased. Plants a slso demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton, etc., and is also useful in storage and transport of seeds to reduce premature germination which may affect agronomic or food quality of the seeds. The present sequence is soybean GA 2-oxidase 2 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GATCACAAATCTTTCTTCATAAATGTTGGTGATTCTCTTCAGGTTATGACCAATGGAAGG

This sequence represents cDNA encoding an Arabidopsis thaliana gibberallin (GA) 2-oxidase, PcGA20x3. This enzyme is a GA 2-beta-gibberallin (GA) 2-oxidase, PcGA20x3. This enzyme is a GA 2-beta-cc gibberallin (GA) 2-oxidase, nc 19-6As and for which 2-beta-hydroxylation is is is conly activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not accumulate in plant tissues. The nucleic acids can be used to transform plants so that gibberallin 2-oxidase can be constitutively over-expressed or or otherwise enhanced to reduce the concentration of bloactive GAs in the plants and therefore to inhibit plant growth. Growth inhibition is useful in many agricultural and hortcultural applications such as enhancing or ordered and ornamental trees, improving yrasses, reducing shoot growth in ordered and ornamental trees, improving tolerance to cold, drought and ornamental trees, improving tolerance to cold, drought and infection, and increasing yields (by the diversion of assimilates from vegetative to reproductive organs). The nucleic acids may also be used to indibit reversibility in the development or gerowth in hedging plants, chibbit reversibility in the development or gerowth in commercial wood species. Antisense constructs of the nucleic acids can also be used to transform plants to reduce the

```

```
HVMDR2, ABC transporter, PMP70 ABC transporter and MRP4 ABC transporter.

The nucleic acid fragments may be used to create transgenic plants where the polypeptides are present at higher or lower levels than normal or in cell types or in developmental stages in which they are not normally cell types or in developmental stages in which they are not normally bysically mapping genes and as markers for traits linked to those genes. The nucleic acid fragments may be used as probes for genetically and polymorphism (RFLP). It can also be used to probe Southern blots containing restriction endonuclease-treated genomic DNAs of a set of individuals representing parent and progeny of a defined genetic cross. The nucleic acid fragments may also be used as hybridisation probes against PCR amplification products generated from the mutation probes against the mutation tag sequence primer in conjunction with an arbitrary genomic site primer. The peptides can also be used to immunise animals to produce polyclonal or monoclonal antibodies with specificity for peptides or protecins comprising the amino acid sequences. Antibodies are useful for extracted.

The present sequence encodes a plant metabolism protein (or extracted).
```

This sequence represents cDNA encoding an Arabidopsis thaliana gibberellin (GA) 2-oxidase, PcGA2ox1. This enzyme is a GA 2-beta gibberellin (GA) 2-oxidase, PcGA2ox1. This enzyme is a GA 2-beta cut of the product of the conflict on C19-CAS and for which 2-beta bydroxylation is its only activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not accumulate in plant tissues. The nocleic acids can be used to transform plants so that gibberellin 2-oxidase can be constitutively over-expressed or otherwise enhanced to reduce the concentration of bloactive GAs in the plants and therefore to inhibit plant growth. Growth inhibition is useful in many agricultural and horticultural applications such as enhancing in many agricultural and horticultural applications such as enhancing calling realists and grain yield in cereals, improving seedling quality, reducing the growth of amenity grasses, reducing shoot growth in orchard and ornamental trees, improving tolerance to cold, drought and corbard and ornamental trees, improving tolerance to cold, drought and corbard and ornamental trees, improving tolerance to cold, drought and corbard and ornamental trees, improving tolerance to cold, drought and corbard and ornamental trees, improving tolerance to cold, drought and corbard and ornamental trees, improving tolerance to cold, drought and corbard and ornamental trees, improving tolerance or assimilates from vegetative to reproductive organs). The nucleic acids may also be used to inhibit reversibility in the development or germination of seeds and commercial wood species. Antisense constructs of the nucleic acids can also be used to transform plants to reduce the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the nucleic acids can also be used to transform plants to reduce the expression of GA 2-oxidase (claimed) to promote plant growth, (e.g., to improve fruit set and growth in seedless grapes, citrus fruits and pears), improve skin texture and fruit shape in apples, increase stem length and therefore yield in sugar cane, increase yield and earliness in celery and rhubarb, improve malting yields and quality in cereals (particularly barley), and increase growth in woody species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      acids, used

When it has been determined, an EST from the other end of this

Glone is listed in the 'Other ESTs on clone' field. This clone is

available through: Biogenetic Services, 801 32nd Ave. Brookings, SD

57006 USA (phone: 800 423 4163; email: info@biogeneticservices.com)

High quality sequence stop: 426.
                                                                                                                                               Shoemaker, R., Keim, P., Vodkin, L., Erpelding, J., Coryell, V., Shoemaker, R., Marra, M., Hiller, L., Kucaba, T., Martin, J., Ranna, A., Bolla, B., Marra, M., Hiller, L., Kucaba, T., Martin, J., Bock, C., Wylie, T., Underwood, K., Steptoe, M., Theising, B., Allen, M., Bowers, Y., Person, B., Swaller, T., Gibbons, M., Pape, D., Harvey, N., Schurk, R., Ritter, E., Kohn, S., Shin, T., Jackson, Y., Cardenas, M., McCann, R., Waterston, R. and Wilson, R.

/note="Vector: pSPORT1; Site_1: Sal1; Site_2: NotI; This cDNA library was constructed from mRNA isolated from seed coats (100-200mgs) of greenhouse grown plants. The library was prepared using the Life Technologies pSuperScript cDNA library construction kit. Complimentary DNA was synthesized from mRNA using a poly (4T) sequence with a Not I restrictions site. Sal I linkers adapers were ligated to the blunt-ended cDNA fragments followed by Not I digestion. The cDNA fragments were directionally cloned into the Not I -Sal I restriction site of the pSPORT1 vector. The ligated cDNA fragments were transformed into E.coli Electromax DH10B host cells. This library was constructed by Dr. Lila Vodkin and Dr. Anu Khanna."

immature seed coats (libraries Gm-c1019 and Gm-c1023); 917

CDNAs from tissue culture derived somatic embryos (source libraries Gm-c1036, and Gm-c1075); 3,275 cDNAs from

germinating seedlings, shoot tips, or leaves exposed to various stresses (source libraries Gm-c1064, Gm-c1065, Gm-c1066, and Gm-c1067); and Gm-c1067, and Gm-c10074, and gercines from be dingal pathogens (source libraries Gm-c1067), and Gm-c1074). The Syoung leaves exposed to bacterial and fungal pathogens was used to select singletons, or a representative of each contig, which were reacked to form library Gm-r1088 and the cDNA clones of the reacked Gm-r1088 library were then sequencing was funded by NSF Plant Genome project #9872565 (http://soybeangenomics.cropsci.uiuc.edu/) as part of creation of a low redundancy soybean cDNA set. The source CDNA libraries were constructed by the laboratories of illa vodkin, University of Illinois, Randy Shoemaker, lowa State University, and Paul Keim, Northern Arizona University as part of the Public EST project, to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, http://web.ahc.um.edu/blodata/nsfsoy/, Reracking and 3' sequencing were conducted by services of the University of Illinois Keck Center for Computational Genomics and Bioinformatics, university of Minnesota, sequencing were conducted by services of the University of Illinois Keck Center for Computational Genomics and library is listed in the 'OTHER EST' field. The detailed information on the source library for each clone can also be obtained by referring to the Genome Systems clone ID of the original cDNA library that is also listed under 'OTHER EST'."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Direct conversions.

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G.

Genoscope members carried out sequencing and annotation : Castelli V., Aury J.M., Jailon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

L Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage :

BP 191 91006 EVRY cedex - FRANCE (E-mail : seqrefégenoscope.cns.fr
- Web : www.genoscope.cns.fr)

The sequences are based on single pass reads
Life Technologies (a division of Invitrogen) members carried out
full-length librairies construction : Temple G.
Genoscope members carried out sequencing and annotation : Castelli
V., Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C.,
Schachter V., Weissenbach J., Salanoubat M.
URGV INRA : Clepet C., Cabofre M.
Annotation is based on the June 2003 version of the Arabidopsis
genome released by MIPS (Munich Information center for Protein
Sequences) : 5 prime and 3 prime are assembled with Phrap.

France (Enual) : Sequence constructions to the sequences are based on single pass reads.

Genoscope members carried out sequencing and annotation : Castel V., Mary J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences) : 5 prime and 3 prime are assembled with Phrap.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    http://www.genoscope.cns.fr/cgi-bin/ggb/ggb?source=Arabidopsis.

Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage : Submitted (18-NOV-2003) Genoscope - Centre National de Sequencage : BP 191 91006 ENRY cedex - FRANCE (B-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr - The sequences are based on single pass reads.

The sequences are based on single pass reads.

Infe Technologies (a division of Invitrogen) members carried out full-length librairies construction : Temple G.

Genoscope members carried out sequencing and annotation : Castelli V. Aury J.M., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA : Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.
                                                                    Sukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnollophyta; eudicotyledons; core eudicotyledons; rosids; eurosida II; Brassicales; Brassicaceae; Arabidopsis.

When you was genoscope.comes its angle pass reads.

The sequences are based on single pass reads.

Life Technologies (a division of Invitrogen) members carried out full-length librairies construction: Temple G.

Genoscope members carried out sequencing and annotation: Castelli V., Aury J. W., Jaillon O., Wincker P., Menard M., Cruaud C., Schachter V., Weissenbach J., Salanoubat M.

URGV INRA: Clepet C., Caboche M.

Annotation is based on the June 2003 version of the Arabidopsis genome released by MIPS (Munich Information center for Protein Sequences). 5 prime and 3 prime are assembled with Phrap.

XhoI; The cDNA library was constructed from mRNA isolated
from degenerating cotyledons of 9-10 day old etiolated
seedlings for the cultivar Williams. Complementary DNA was
synthesized from mRNA using a primer consisting of a
poly(dT) sequence with a XhoI restriction site. EcoRI
adapters were ligated to the blunt-ended cDNA fragments
followed by XhoI digestion. The cDNA fragments were
directionally cloned into the EcoRI-XhoI restriction site
of the pBluescript vector. The ligated cDNA fragments
were transformed into DH10B host cells (GibcoRR). This

/note="Vector: pBluescript II SK(+) XR; Site 1: EcoRI;
Site_2: XhoI; supplier: Pathogen-challenge series. Tubers
from pathogen-free Solanum tuberosum var. Shepody, clone
1756, were incculated with 5 ul of Phytophthora infestans
(A2-mating type), through 2 puncture wounds 3 cm apart.
The tubers were incubated 1 minute to allow inoculum
absorption. The infection area was outlined for future
collection reference. Surface slices were sampled from the
tubers at 1 day, 5 days, 7 days, 11 days and 14 days
post-infection All samples were pooled and used for RNA
isolation and library construction. A normalized library
was constructed following a modified protocol of Bonaldo
et al. (1996. Genome Research 6: 791-806)."

/note="Vector: pBluescript pSK; Site 1: ECORI; Site 2: XhO1; M. truncatula sterilised seeds were germinated for 72h at 25 C, before transplanting into a 1/3 Epoisses soil: 2/3 calcined Terragreen mix in the presence of onion root fragments colonized by the arbuscular mycorrhizal fungus Glomus intraradices (Schenck & Smith, isolate LPA8). The plants were watered every day and twice a week with a modified nutrient Long Ashton solution without phosphate but with a high level of nitrate. After 3 weeks RNA was extracted from whole root systems. CDNA was prepared from poly4+ enriched RNA. The CDNA was prepared from poly4+ enriched RNA. The CDNA was prepared from poly4+ enriched RNA. The cDNA was preased from poly4+ enriched RNA inserts were ware extracts. Plasmids containing cigapack Gold packaging extracts. Plasmids containing cDNA inserts were mass-excised from phage stocks using ExAssit helper phage and propagated in SOLR cells. Clone ordering and sequencing was performed by the Centre National de Sequencage (Genoscope, Evry, France). Note: EST may be of fungal origin."
